

Swivel/linear units DSL-B

FESTO

Key features

At a glance

- High repetition accuracy thanks to cushioning components with fixed stop
- Swivel angle can be infinitely and accurately set
- The mechanical gearing between the stop element and the swivel module prevents movement of the stop system under load
- Compact sensing of the swivel motion via proximity switches SME/SMT-10
- With plain-bearing guide
- With recirculating ball bearing guide
- Swivel motion of up to 270°
- Linear motion of up to 200 mm stroke
- The two movements can be controlled individually or simultaneously
- High rotational energy during swivelling due to self-adjusting shock absorbers which can be directly mounted
- Supply ports at one end for quick, clearly laid-out tubing connections
- High precision thanks to recirculating ball bearing guide
 - Backlash-free swivel motion
 - Torque load also possible during the linear motion

The technology in detail

[1] Cushioning

- Choice of two types of cushioning, each with metal fixed stop:
 - Elastic cushioning components
 - Hydraulic shock absorber

[2] Position sensing

- Compact sensing of the swivel position with proximity switches SME/SMT-10

[3] Sensor bracket

- The proximity switches are mounted directly on the stop system. The sensor retainer can be ordered as an accessory

[4] Stop lever

- The magnet in the stop lever enables the swivel angle to be sensed

[5] Piston rod

Mounting interface, for example for a gripper

[6] Slot for proximity switch

- Compact sensing of the linear position with proximity switches SME/SMT-8

[7] Precision end-position adjustment

- After the lock nut is loosened, the end positions can be precisely adjusted using an Allen key

[8] Angle scale

- The required swivel angle can be easily preset using the scale

Mounting options

Direct mounting

Flange mounting

With size 16:
The mounting thread on the bearing cap complies with DIN ISO 6432.

Flange mounting

With size 20 ... 40:
Mounting hole pattern to DIN ISO 6431, VDMA 24 562 and NF E 49 003.1.

Via slot nuts

2) Per side

3) At max. swivel angle

4) Important: Where there is an external, alternating force, the swivel angle play of the respective variant (plain-bearing guide GF or recirculating ball bearing guide KF) must be added to the swivel angle.

Operating and environmental conditions		
Operating medium		Compressed air to ISO 8573-1:2010 [7:4:4]
Note on the operating/pilot medium		Lubricated operation possible (in which case lubricated operation will always be required)
Operating pressure	[bar]	2.5 ... 8
Ambient temperature ¹⁾	[°C]	-10 ... +60
Corrosion resistance CRC ²⁾		1

1) Note operating range of proximity switches

2) Corrosion resistance class CRC 1 to Festo standard FN 940070

Low corrosion stress. Dry indoor application or transport and storage protection. Also applies to parts behind covers, in the non-visible interior area, and parts which are covered in the application (e.g. drive trunnions).

Max. dynamic load torque (linear motion)							
Size			16	20	25	32	40
	With plain-bearing guide	[Nm]	0.1	0.2	0.45	0.8	1.1
	With recirculating ball bearing guide	[Nm]	0.17	0.35	0.7	1.0	5.4

 **Note**

The vane is not suitable for end-position fixing, i.e. the stop lever and stops must not be removed.

With plain-bearing guide:
With eccentric attachment of the payload and horizontal installation, increased friction forces arise internally, reducing the effective force of the linear motion.

Accessories

Adapter kit
HAPB, HAVB

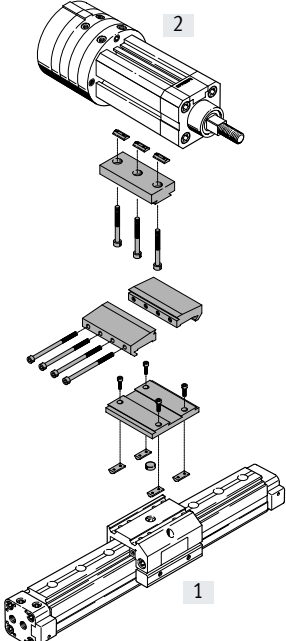

Material:
Wrought aluminium alloy
Free of copper and PTFE
RoHS-compliant

 **Note**

The kit includes the individual mounting interface as well as the necessary mounting material.

Permissible drive/drive combinations with adapter kit

1) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

2) For DGPL only
